ABSTRACT

The data summarized in this paper represent 11 years (1977-1988) of information on the status of women in intercollegiate athletics gathered in an on-going national study of all four-year college and university members of the NCAA with intercollegiate athletic programs for women. It is noted that over this period there has been an increase in sports participation by girls and women and a decrease in women in leadership positions. (JD)

WOMEN IN INTERCOLLEGIATE SPORT

A Longitudinal Study - Eleven Year Update
1977-1988

R. Vivian Acosta - Linda Jean Carpenter

- >> The average number of sports offered for women has grown to 7.31 per school. Ten years ago it was 5.61. Basketball, volleyball, tennis and cross country are the four most popular sports.
- >> Only 48.3% of the coaches of women's teams are females. In 1972 more than 90% of women's teams were coached by females.
- >> Less than 1% of the coaches of men's teams are females.
- >> About 5757 jobs exist in 1988 for head coaches of women's teams. This is an increase of 52 jobs since last year but women did not share in any of the increase and actually hold 7 fewer jobs than in 1987.
- >> Only 16% of women's programs are headed by a female administrator. In 1972 more than 90% were headed by a female.
- >> Women hold 29% of all administrative jobs in women's programs.
- >> No females at all are involved in the administration of 32% of women's programs.

Background The architecture of sports for girls and women in the United States has changed remarkably in the last one and a half decades

In 1971 the AIAW (Association of Intercollegiate Athletics for Women) drew its first breath. A year later, Congress enacted Title IX, to become effective in 1978, prohibiting sex discrimination in educational programs receiving federal funds. With Title IX's passage and the enlargement of AIAW's membership and financial base, a massive growth in the number of girls and women participating in sport took place.

In counterpoint, local leadership positions such as coach, athletic director, and official, which were previously held by women, became more frequently occupied by men.

Throughout the life of the AIAW the involvement of women in the national governance of women's intercollegiate athletics grew steadily. When the NCAA also offered a governance structure for women's sports, and when the AIAW lost its anti-trust lawsuit against the NCAA, the AIAW drew its last breath leaving the field of national governance to the male-led NCAA (and its smaller counterpart, the NAIA).

Title IX also left the field for the period of four years from 1984 to 1988. The 1984 U.S. Supreme Court *Grove City* decision effectively denied the application of Title IX to non-federally funded programs such as college departments of physical education and athletics. In March of 1988 however, Congress enacted, over a presidential veto, the Civil Rights Restoration Act which effectively renews the jurisdiction of Title IX over college departments of physical education and athletics. The period of four years without Title IX, were years in which athletic scholarships for women were reduced and other negative changes were made in some women's intercollegiate athletic programs.

The positive/negative pattern of the last 16 years can be summarized as: An increase in sports participation by girls and women and a decrease in women in leadership positions.

A number of projects, programs and groups have been encouraging the positive parts of the pattern and intervening against the negative parts. If you would like information on these projects or a list of more detailed readings on the changing status of women's sports, please let us know.

Please note: Future updates may be obtained by sending a self-addressed, stamped (45¢ envelope) with request to L. Carpenter/V. Acosta Dept. of PE, Brooklyn College, Brooklyn, NY 11210 (13 year update anticipated March, 1990)

(c) R. Vivian Acosta and Linda Jean Carpenter
Brooklyn College, Brooklyn, New York 11210

Data Summary The data summarized on the following pages represent eleven years (1977-1988) of information on the status of women in intercollegiate athletics gathered in an on-going national study of all four-year college and university members of the NCAA with intercollegiate athletic programs for women. In addition, a smaller on-going study concerning the causes of the changes in status is also summarized for your use in the attached document (green pages).

Participation. The opportunity for female athletes to participate in intercollegiate sports has increased during the past eleven years. For example, in 1977, one year before the Title IX compliance date, the number of sports offered women was 5.61 per school. In 1980 the number had grown to 6.48, in 1986 to 7.15 and in 1988 to 7.31.

Basketball continues to be the most common sport in women's intercollegiate programs but the fastest growing sports since 1977 are soccer (found in 2.8% of schools in 1977 and 38.3% in 1988), and cross country (found in 29.4% of schools in 1977 and 82.4% in 1988). Other sports showing major increases are softball, track, and swimming. Minor sports showing a marked increase are crew, golf, and lacrosse. Over the years though the number of junior varsity opportunities for female athletes and coaches has declined.

Leadership. The decrease in the percentage and number of women serving as coaches continues. This is true even though the number of coaching jobs has increased. There is general agreement in the literature that 90 to 100% of coaching jobs for women's teams were held by females when Title IX was enacted in 1972. By 1977 our data show a precipitous decline had already taken place with women holding only 58.2% of the coaching jobs within women's sports. In 1988 the percentage had dropped to 48.3%.

The literature is in agreement that in 1972 more than 90% of these programs were directed by a female. In 1988, only 16.05% of women's intercollegiate programs were under the supervision of a female head athletic director.

There has been no similar entrance of females into the coaching or administrative ranks of men's programs. In 1972 less than 1% of these positions were held by females and it remains so to this day.

In fact, over 32% of programs for women have no female at all involved in the administrative structure. In Division III where there are fewer individuals in the administrative structures at each school, it is very common to find no female involved. For instance, in Division III almost 38% of the programs have no female representation compared to 25.6% in Division I.

Causes. The gender make-up of the administration might have some influence on the gender make-up of the coaching staffs. In a parallel study concerning the reasons for the gender distribution in the coaching staffs, we found a number of interesting perceptions and, indeed, differences in perceptions based on the respondent's gender. For a summary of the 1988 update of this parallel study, please refer to the green pages which accompany this document.

Regardless of the sub-group (male/female, Division I, II, III), of the respondent and the differing perceptions as to the causes, there was a pervasive expression that procedures should continue to be developed to increase the representation of female administrators and coaches.

Administrative Structure. A two-person administrative structure is the most common structure in any division. This might suggest a greater opportunity for females to be represented in the administration yet often this is not the case.

In Division III schools, where entry level jobs might be expected to require less experience than in Division I, it is much more likely to find a single administrator (Division III=37.1% and Division I=10.8%). Almost 38% of Division III schools have no female at all involved in the administration while only 25.6% of Division I schools have no female involved. So, where entry level jobs should be more easily obtained, they are less obtainable for women.

There has been an increase of 214 jobs within the administrative structures in the last two years (1613 jobs in 1986 compared to 1827 jobs in 1988). Yet there are only 528 women holding jobs within the administrative structures of women's programs (28.9% of the 1827 jobs). Indeed, the average number of women involved in the administration of women's programs is less than one per school (0.67 females/school).
